ACCOUNTING CLERK HANDBOOK | SYSCOHADA REVISED (AUDCIF) | IFRS STANDARDS

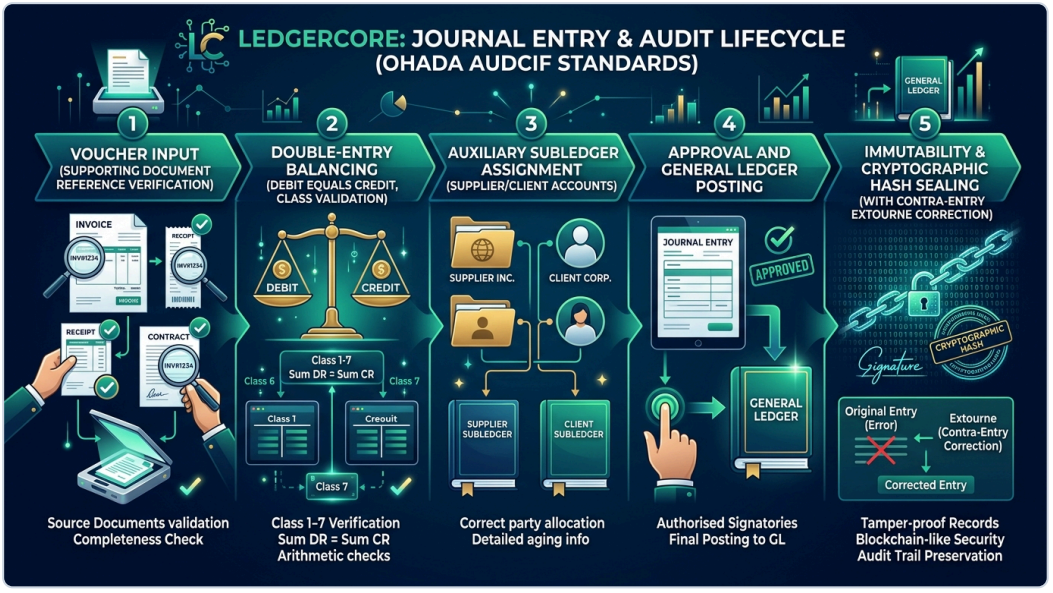

Figure 1: LedgerCore Journal Entry & Audit Lifecycle under OHADA AUDCIF Standards — From Voucher Input and Double-Entry Balancing to Auxiliary Subledger Allocation, General Ledger Posting, and Tamper-Proof Cryptographic Hash Sealing.

1. Role Scope & Primary Responsibilities

As an **Accounting Clerk / Data Entry Specialist**, you are responsible for day-to-day transaction processing: - 📝 Capturing supplier bills and service invoices in specialized journals. - 🩺 Processing patient consultation and hospital service billing. - 💵 Recording petty cash disbursements and Mobile Money collection receipts. - 🔤 Matching payments to invoices (Open-Item Matching). - ⚖️ Ensuring every captured voucher complies with **AUDCIF Article 17** (mandatory supporting document, balanced double-entry, no negative numbers).

2. Step-by-Step Procedure: Capturing a Journal Voucher

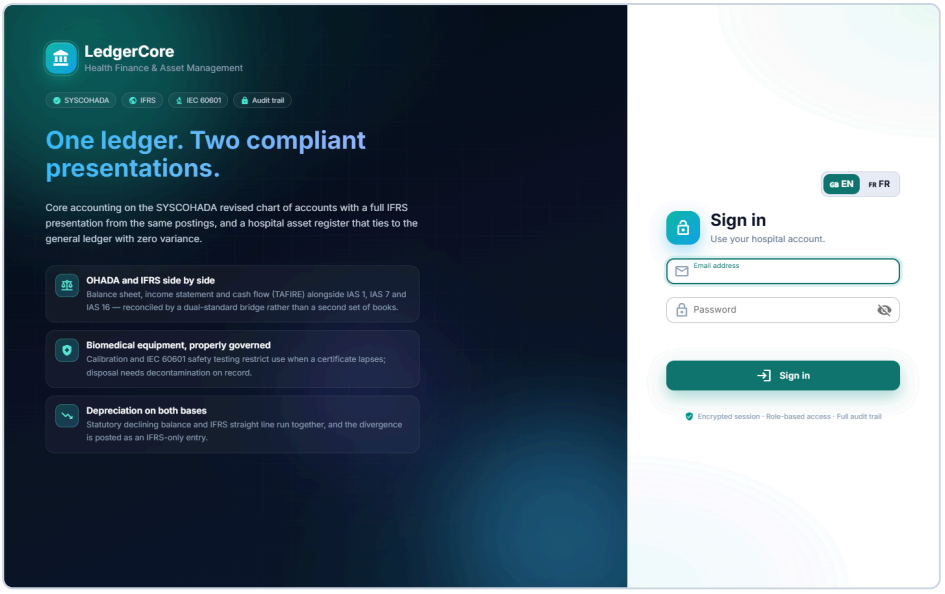

Figure 2: LedgerCore Authentication Screen — Choose English or French and Sign in with Assigned Clerk Credentials.

Step 2.1: Sign In & Open the Entry Form

1. 🔑 **Sign In:** Enter your assigned username/email and password.
2. 📝 **Navigate to Journal:** Go to **Accounting → Journal Entries** (`/journal`).
3. ➕ **Open Form:** Click the **+ New Entry** button.

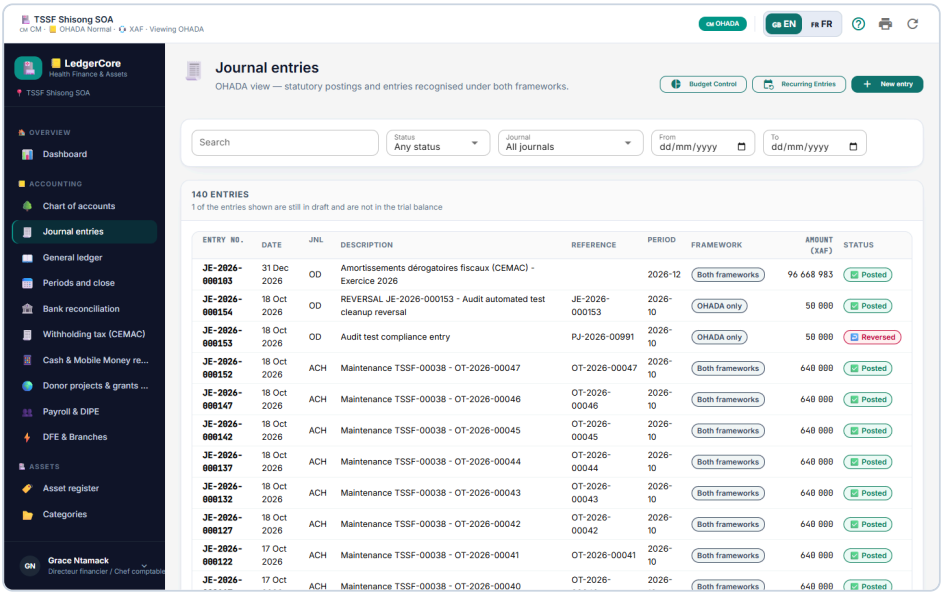

Figure 3: Journal Entries Screen — Viewing Draft Statuses, Transaction References, and Balancing Columns.

Step 2.2: Fill the Header Information

- 📚 **Journal Code:** Choose the appropriate specialized journal:
  - `ACH` for Supplier purchases (pharmaceuticals, medical reagents, surgical consumables).
  - `VTE` for Patient billing, surgery packages, consultation revenues.
  - `BQ` for Bank transactions (deposits, transfers, fees).
  - `CA` for Cash desk and petty cash receipts.
  - `OD` for Miscellaneous adjustments and accruals.

- 🗓️ **Entry Date:** The date indicated on the paper receipt or supplier invoice (must fall in an open period).
- 🏷️ **Reference * (Mandatory under AUDCIF Art. 17):** Enter the exact invoice number (e.g., `FAC-2026-0819`) or receipt voucher reference. Leaving this field blank is prohibited by the validation engine.
- 📄 **Description:** Clear, concise summary of the transaction (e.g., `Sterile gauze and surgical gloves - BioMed`).

Step 2.3: Populate Journal Lines (Minimum 2 Balanced Lines)

1. 📈 **Debit Line (Expense or Asset):**
   - In the **Account** field, search by code or name (e.g., `601100 — Medical Supplies`).
   - Enter the debit amount (e.g., `250,000.00`).
   - For all Class 6 expense accounts, select the relevant **Cost Centre** (e.g., `Surgery Ward`, `ICU`, `Central Pharmacy`).

2. 📉 **Credit Line (Counterpart / Payable):**
   - Search for the balancing account (e.g., `401100 — Trade Payables / Suppliers`).
   - Enter the credit amount (e.g., `250,000.00`).
   - **Auxiliary Third Party:** For collective accounts (`4011`, `4111`), select the individual supplier or client from the dropdown (e.g., `[FRN] Air Liquide Healthcare`).

3. ⚖️ **Verify Equilibrium:** Look at the bottom right. The **Out of balance** counter must read `0.00` in green.
4. 💾 **Save:** Click **Save as Draft**. The entry is saved and queued for the Chief Accountant's review and posting.

---

3. How to Use the Intelligent Counterpart Engine

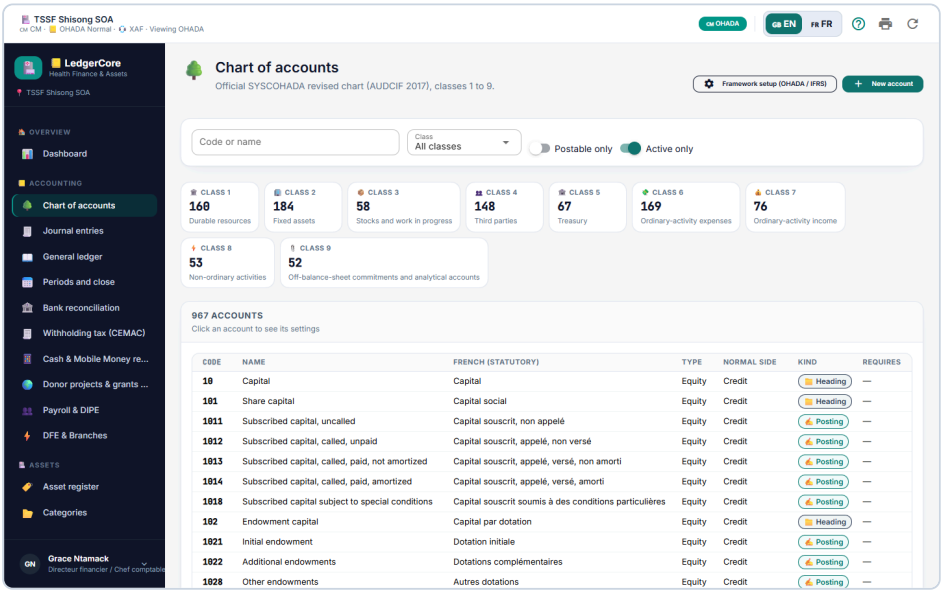

Figure 4: Chart of Accounts Screen — Searching Accounts, Classes, and Checking Analytical Requirements.

When capturing routine hospital transactions, you do not need to look up every credit account manually: 1. ✍️ Enter the first line (e.g., Account `6051 — Electricity & Power` for `250,000 XAF`). 2. 💡 Click **Propose Counterpart** (or let auto-suggest trigger). 3. 🤖 The engine suggests the standard counterpart (e.g., Account `4011` or `5211`) based on previous hospital entries. 4. 🔍 Review, adjust the third party if needed, and click save.

4. Step-by-Step Procedure: Open-Item Matching & Settlement

When a supplier is paid or a patient bill is cleared: 1. 📖 Navigate to **Accounting → General Ledger** (`/ledger`). 2. 👥 Select the third-party account (e.g., `401100 — Trade Payables / Suppliers`). 3. 🔍 Click the **Matching** tab and filter for **Unmatched Items**. 4. ☑️ Check the box on the original invoice credit line and the bank payment debit line. 5. ⚖️ Confirm that total selected debits equal total selected credits ($\Delta = 0.00$). 6. 🔤 Click **Match Selected Items**. The system assigns a matching letter (`AA` , `AB` ...) confirming the item is fully settled and cleared.

5. Important Statutory Rules to Remember

> ⚠️ **IMPORTANT**
>
> - 🚫 **Never enter negative amounts.** Under OHADA AUDCIF rules, negative entries are invalid. If you need to reduce an amount, invert the debit and credit sides. - 🚫 **Never post to heading accounts (2 or 3 digits).** Always select a 4-to-8 digit operational account (e.g., `601100` , not `60` or `601`). - 📄 **Always attach a reference.** If you do not have an official supplier invoice number, use the internal voucher number generated by procurement.
