LEDGERCORE
ENTERPRISE INDUSTRIAL & MULTI-SITE EDITION

INSTITUTIONAL & INDUSTRIAL GRADE

TECHNICAL PROPOSAL

Integrated Financial, Asset & Operations Engine for Capital-Intensive Enterprises

An institutional-grade ERP platform architected specifically for heavy equipment fleet governance, plant maintenance, multi-axial analytical budgeting, and strict CEMAC / SYSCOHADA regulatory compliance.

- CEMAC / OHADA AUDCIF Revised
- Heavy Equipment & Processing Plants
- Telematics & Operating Hour Maintenance
- Multi-Axial Analytical Budgeting
- Offline Multi-Site Edge-Sync
- Dual IFRS 16 & Componentized Accounting

CLIENT SECTOR	REGULATORY FRAMEWORK	ARCHITECTURE MODEL	CLASSIFICATION
Heavy Industry & Infrastructure	CEMAC / OHADA / IFRS	Distributed Cloud & Edge	Commercial-in-Confidence

01 Executive Summary & Industry Strategic Fit

Capital-intensive corporations operating across Central and West Africa (CEMAC / OHADA zone) encounter a unique convergence of operational, logistical, and statutory financial pressures. Industrial infrastructure and heavy fleets are highly capital-intensive, operating sites are geographically dispersed across isolated regional hubs with fragile telecommunications infrastructure, equipment downtime costs tens of thousands of dollars per hour, and host-nation regulations mandate strict compliance with revised **SYSCOHADA standards (AUDCIF)**, local content laws, and specific statutory withholdings.

🚨 The Enterprise Dilemma: Fragmented Systems

Traditional industrial enterprises rely on disconnected point solutions: standalone workshop spreadsheets, siloed procurement software, and separate corporate accounting packages.

- ✓ **Uncontrolled Budget Overruns:** High-value spare parts ordered for heavy machinery without real-time credit availability verification.
- ✓ **Distorted Asset Valuation:** Major equipment overhauls expensed improperly rather than capitalized under componentized accounting.
- ✓ **Audit & Fiscal Penalties:** Late or non-compliant SYSCOHADA financial reporting and withholding tax liabilities.

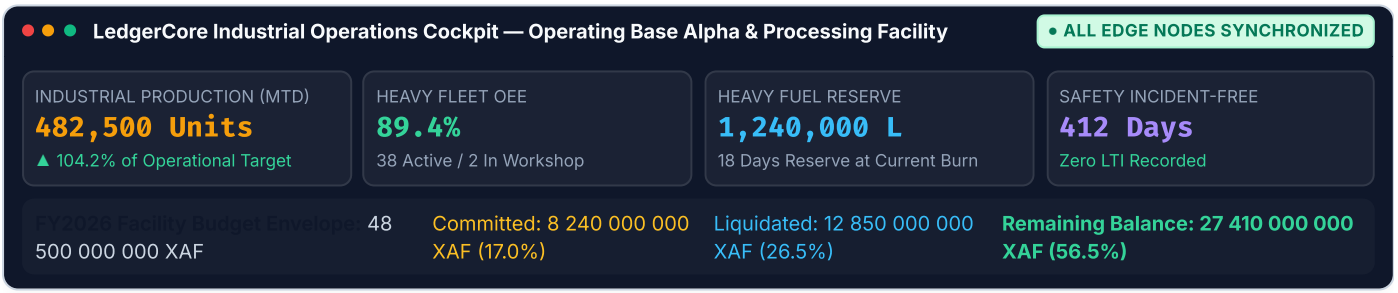

✨ The LedgerCore Solution: Unified Convergence

LedgerCore delivers an institutional enterprise ecosystem where accounting, heavy fleet lifecycle, predictive maintenance, and multi-axial budgeting operate as a **single, synchronized organism**.

- ✓ **Real-Time Ceiling Enforcement:** Maintenance requisitions automatically check and commit budget envelopes before purchase orders are issued.
- ✓ **Units of Production (UOP) Depreciation:** Machinery depreciated dynamically based on engine hours or operational output.
- ✓ **Autonomous Edge Sync:** Regional operating sites run 100% offline and reconcile seamlessly with HQ upon link restoration.

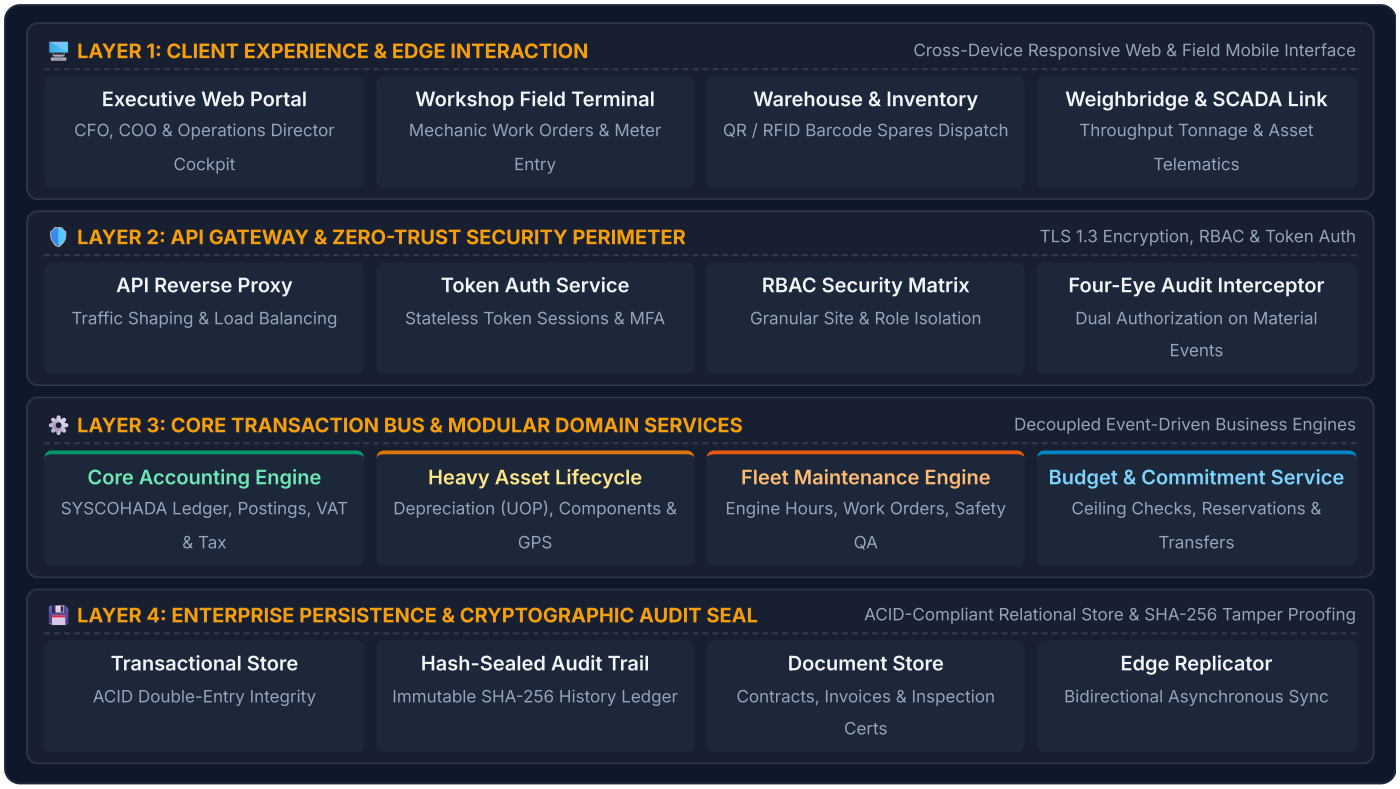

Core Operational Targets

FLEET AVAILABILITY (OEE)	BUDGET VARIANCE	AUDIT RECONCILIATION	CEMAC COMPLIANCE
+28.5%	**0.00%**	**Real-Time**	**100% AUDCIF**
Preventive meter-based service triggers	Hard automated ceiling blocking	Automated double-entry posting engine	Statutory withholdings & fiscal seals

02 Enterprise Technical Architecture

LedgerCore is built on a **Distributed Micro-Service & Modular Tiered Architecture** designed for high availability, sub-second latency, zero transactional loss, and resilient operation across remote industrial installations. The architecture strictly decouples the user experience layer, business rule orchestration, security perimeter, and the financial transactional persistence store.

🛰️ Multi-Site Edge-Sync: Zero-Interruption Offline Capability

Remote operating bases and regional plants frequently suffer from satellite latency or fiber dropouts. LedgerCore employs an **Offline-First Edge Architecture**. Field supervisors can log work orders, dispatch spare parts, and verify pre-shift safety inspections locally without internet connectivity.

When satellite/GSM link is re-established, the Multi-Site Edge-Sync automatically streams queued transactions using conflict-free deterministic resolution, ensuring corporate headquarters maintains exact real-time financial visibility without halting plant operations.

🔒 Institutional Security & Four-Eye Segregation

Heavy industrial operations demand rigorous governance to prevent misappropriation of high-value parts, fuel, and capital expenditures. LedgerCore implements:

- ✓ **Granular Role-Based Access Control (RBAC):** Plant mechanics cannot modify purchase orders; accounting clerks cannot alter maintenance schedules.
- ✓ **Dual Authorization (Four-Eye Policy):** Credit transfers and asset write-offs require secondary supervisor approval.
- ✓ **Immutable SHA-256 Journal Sealing:** Fiscal period closures produce cryptographically sealed blocks that cannot be altered retroactively.

03 CEMAC / SYSCOHADA Core Accounting & Compliance

LedgerCore is built from the ground up to comply with the **SYSCOHADA Revised Accounting Framework (Acte Uniforme relatif au Droit Comptable et à l'Information Financière - AUDCIF)** governing all member states across the CEMAC and UEMOA economic communities. It combines statutory local compliance with international dual-standard reporting.

SYSCOHADA CHART OF ACCOUNTS

Native support for Classes 1 to 8 with specialized industrial mappings: Class 2 (Industrial concessions, site development, heavy machinery), Class 6 (Raw materials, reagents, royalties, rehabilitation provisions), Class 7 (Product & industrial sales).

DUAL REPORTING (OHADA + IFRS)

Simultaneous presentation of statutory OHADA financial statements alongside international IFRS adjustments: **IFRS 16** (Heavy Lease Capitalization), **IAS 16** (Componentized Depreciation), and **IAS 37** (Site Environmental Decommissioning).

MULTI-CURRENCY TREASURY

Functional currency in **XAF (Central African CFA Franc)** with automated FX revaluation on USD, EUR, and GBP. Essential for international export contracts, fuel import hedging, and overseas capital equipment procurement contracts.

🏛️ CEMAC Tax, Statutory Royalties & Withholdings Engine

Corporations face complex withholding obligations under CEMAC fiscal directives. LedgerCore automates calculation, deduction, reporting, and voucher generation for:

TSR (Taxe Spéciale / Non-Resident)
Automated 15% withholding on specialized technical assistance, engineering consultants, and foreign contractors.

Statutory Concession Dues
Automated deduction tied directly to industrial extraction volumes, throughput grade, and export FOB market value.

Local Vendor Withholding
Automated 5.5% / 2.2% advance withholding tax with automated generation of official fiscal retention certificates.

LedgerCore SYSCOHADA General Ledger Postings — Industrial Operations Vouchers — BALANCED DOUBLE-ENTRY LEDGER

VOUCHER #	DATE	ACCOUNT (SYSCOHADA REVISED)	DESCRIPTION / TRANSACTION OBJECT	DEBIT (XAF)	CREDIT (XAF)	STATUS

04 Heavy Asset Management & Componentized Accounting

In capital-intensive industries, fixed assets represent the core of the balance sheet. LedgerCore manages the entire lifecycle of high-capital yellow machinery, fixed processing infrastructure, heavy transport logistics, and site utility networks with industrial precision.

🚜 Fleet & Heavy Plant Governance

Complete custodial tracking for earthmoving excavators (Caterpillar, Komatsu, Liebherr), 100-ton heavy haul trucks, drilling units, primary crushing plants, ball mills, and industrial power generation stations.

- ✓ **Componentized Asset Accounting:** Compliant with IAS 16 & SYSCOHADA. The chassis, engine, and undercarriage of heavy equipment are tracked as distinct components with separate depreciation schedules.
- ✓ **Rugged Asset Identification:** Support for industrial metal QR tags, RFID tags, and serial barcoding for rapid field auditing in challenging operational environments.
- ✓ **Location & Base Assignment:** Real-time tracking of asset assignment across regional sites, operational bays, and standby emergency reserves.

Units of Production (UOP) Depreciation

Traditional time-based straight-line depreciation misrepresents heavy industrial assets, as mechanical wear-and-tear correlates directly with operating intensity rather than calendar months.

Industrial UOP Depreciation Formula:

```
Depreciation = (Asset Cost - Salvage Value) × (Hours Run in Period / Total Rated Engine Life)
```

LedgerCore supports **Units of Production (Engine Operating Hours or Production Units)**, Accelerated Reducing Balance, and Straight-Line methods, updating Net Book Value (NBV) automatically every billing cycle.

Heavy Industrial Asset Register & Component Valuation Master — 38 HEAVY ASSETS MONITORED

ASSET TAG	MACHINERY DESCRIPTION	CATEGORY	OPERATING BASE / LOCATION	OPERATING METER	GROSS ACQUISITION COST	NET BOOK VALUE (XAF)	STATUS
EQ-CAT-777G-04	Caterpillar 777G Heavy Off-Highway Truck (100T)	Heavy Yellow Fleet	Site Base Alpha (Haulage Depot)	8,420 Engine Hrs	845 000 000 XAF	512 800 000 XAF	IN SERVICE

IFRS 16 LEASE RECOGNITION
Right-of-Use (RoU) asset recognition for leased contractor fleets with automated interest & amortization schedules.

REVALUATION & IMPAIRMENT
Integrated impairment testing pursuant to IAS 36 when asset operating capacity or market output values fluctuate.

DECOMMISSIONING PROVISIONS
Capitalized facility restoration asset with unwinding interest provisions under SYSCOHADA Class 19 provisions.

05 Fleet & Plant Maintenance Management

In continuous manufacturing, extraction, and infrastructure plants, unscheduled equipment downtime halts downstream production, resulting in staggering financial losses. LedgerCore's Maintenance Engine enforces **Preventive, Corrective, and Telematics-Driven Service Schedules** directly connected to warehouse inventory and budget envelopes.

OPERATING HOURS TRACKING

Continuous engine-hour logging from telematics and pre-shift inspections. Automated dispatch of Service PM-1 (250h oil/filters), PM-2 (500h hydraulics), PM-3 (1,000h transmission), and PM-4 (2,000h major engine overhaul).

WORK ORDER LIFECYCLE

End-to-end work order tracking: Fault reporting → Technician assignment → Parts reservation → Workshop execution → QA Supervisor inspection → Commissioning sign-off and historical log archiving.

CRITICAL SAFETY CHECKLISTS

Integrated calibration and safety governance for weighbridges, laboratory spectrometry scales, pressure vessels, and hoisting cables. Restricts machine dispatch if statutory safety testing lapses.

LedgerCore Work Order Dispatch Cockpit — Central Workshop & Heavy Bay Operations — 8 AWAITING QA | 2 IN PROGRESS

WO REF	PRIORITY	TARGET INDUSTRIAL ASSET	WORK ORDER TYPE / ACTION	ASSIGNED SPECIALIST	SPARES RESERVED	EST. COST (XAF)	BUDGET COMMITMENT	STATUS

Mean Time Between Failures (MTBF) & Spare Parts Dual Validation

When a work order is generated for a major overhaul (e.g., replacement of excavator hydraulic pumps), the system automatically performs dual validation:

1. Warehouse Spare Parts Reservation:
Locks critical parts in warehouse stock to ensure parts are not double-allocated. Deducts stock upon work order sign-off and posts consumption directly to SYSCOHADA Class 31/60 accounts.

2. Budget Ceiling Check & Commitment:
Instantly checks the facility's maintenance budget allocation. If sufficient credits exist, a real-time statutory commitment is registered, preventing unauthorized expenditures.

06 Budgeting & Statutory Commitment Accounting

Institutional stakeholders, boards of directors, and financial lenders in heavy industry demand absolute budgetary discipline. LedgerCore embeds a complete **Multi-Axial Budgeting and Real-Time Commitment Accounting (Comptabilité des Engagements)** engine designed after sovereign West African institutional standards.

📊 Multi-Axial Budgetary Architecture

Budgets are structured across four simultaneous analytical axes:

- ✓ **Operating Site / Plant:** Site Base North, Site Alpha, Secondary Processing Facility, Central Logistics Hub.
- ✓ **SYSCOHADA Account:** Class 6 (Opex: Reagents, Diesel, Maintenance, Salaries) and Class 2 (Capex: Facility Expansion, Heavy Fleet).
- ✓ **Department / Cost Center:** Earthmoving, Haulage Logistics, Materials Processing, Safety & Environment, Administration.
- ✓ **Funding Program / JV Partner:** Own Equity, Commercial Facilities, Joint Venture Shareholder accounts.

🛡️ Real-Time Overrun Blocking (Contrôle des Engagements)

In traditional ERPs, budgets are evaluated post-facto during invoice entry—when the liability has already been incurred.

LedgerCore enforces **Pre-Commitment Hard Blocking**: When a purchase order, contractor agreement, or major work order is submitted, the engine checks:

```
Available = Revised Dotation - Actual Spent - Pending Commitments
```

⛔ **If Request > Available Balance: Transaction is strictly blocked.**

LedgerCore Budgeting & Commitment Interface — High-Visibility XAF Controls — FY2026 ACTIVE BUDGET

APPROVED BUDGET	COMMITTED CREDITS	LIQUIDATED / POSTED	AVAILABLE BALANCE	EXECUTION RATE
48 500 000 000 XAF	8 240 000 000 XAF	12 850 000 000 XAF	27 410 000 000 XAF	43.5% Consumed
All Sections (Opex + Capex)	Active POs & Work Orders	Class 6 & 2 Postings	Net Available Appropriations	

ACCOUNT (SYSCOHADA)	SECTION	FACILITY / COST CENTER	BUDGET (XAF)	COMMITTED (XAF)	ACTUAL SPENT (XAF)	AVAILABLE (XAF)	BURN %
6041 Heavy Diesel Fuel	OPEX	Site Base Alpha (Haulage & Logistics)	12 500 000 000	1 850 000 000	4 200 000 000	6 450 000 000	48.4%
6241 Machinery Maintenance	OPEX	Heavy Fleet Depot & Bays	8 400 000 000	2 100 000 000	2 850 000 000	3 450 000 000	58.9%
2311 Industrial Facility Expansion	CAPEX	Civil Works & Plant Deepening	16 000 000 000	3 200 000 000	4 100 000 000	8 700 000 000	45.6%

VIREMENTS DE CRÉDITS (CREDIT TRANSFERS)

Formal decision-making workflow to transfer surplus appropriations from one operational line to another (e.g. reallocating development savings to heavy haulage maintenance) with dual-executive sign-off and complete justification audit history.

MULTI-CURRENCY CONTRACT RESERVATIONS

Reserve multi-year specialized engineering contracts in foreign currency (USD / EUR) with automatic conversion to functional currency XAF and variance monitoring against foreign exchange fluctuations.

07 Seamless Cross-Module Synergy: The Closed-Loop Workflow

The crowning achievement of the LedgerCore platform is the **absolute, zero-latency integration** among Accounting, Asset Management, Fleet Maintenance, and Budgeting. The following real-world industrial scenario illustrates this closed-loop harmony:

Scenario: 100-Ton Heavy Haul Truck CAT 777G Engine Overhaul
Location: Operating Base Alpha | Asset Tag: EQ-CAT-777G-04 | Trigger: Telematics Hour Counter reaches 2,000 Operating Hours

1. **Telematics Trigger & Work Order Dispatch** MAINTENANCE
   The telemetry interface detects engine operating hours crossing 2,000 hours. The system automatically opens Preventive Work Order **#WO-2026-0842**, attaches the engine overhaul technical protocol, schedules workshop bay 3, and drafts the required parts list (gaskets, pistons, synthetic oils).

2. **Real-Time Budget Ceiling Verification & Commitment** BUDGETING
   The overhaul requisition (est. 18,500,000 XAF) automatically queries the *Operating Base Alpha Heavy Fleet Maintenance* budget line. The engine confirms available headroom and creates an active statutory commitment **#BC-9402**, instantly decrementing available credits and locking the funds.

3. **Componentized Asset Lifecycle & Meter Update** ASSET MANAGEMENT
   Technicians scan the CAT 777G metal QR code. The system logs the replacement of Engine Component Serial #ENG-9982, updates the asset technical record, recalculates the remaining asset useful life under IAS 16 / SYSCOHADA, and resets the PM-4 counter to zero.

4. **Automated SYSCOHADA Journal Entries & Inventory Relieving** CORE ACCOUNTING
   Upon QA supervisor sign-off, the transactional posting engine automatically generates balanced double-entry vouchers: Debiting **Account 6241 (Equipment Maintenance)** or **Account 231 (Asset Capital Enhancement)** and Crediting **Account 311 (Warehouse Spares Inventory)** and **Account 401 (Vendor Payable)** with full VAT and withholding tax tracking. Zero manual bookkeeping required!

OPERATIONAL EVENT	MAINTENANCE MODULE	BUDGETING MODULE	ASSET MODULE	ACCOUNTING LEDGER
Hour Threshold Reached	AUTO-GENERATE WO	CHECK DOTATION	LOG OPERATING METER	IDLE
Parts Requisition	RESERVE STOCK	COMMIT FUNDS (#BC)	LINK PART TO ASSET TAG	PENDING VOUCHER
Work Order Execution	LOG LABOR & QA CHECK	HOLD RESERVED AMOUNT	UPDATE COMPONENT S/N	WIP RECORDED
Final Sign-Off	CLOSE & CERTIFY WO	LIQUIDATE COMMITMENT	UPDATE CARRYING VALUE	AUTO-POST SYSCOHADA

08 Security, Governance & Implementation Roadmap

Deploying an enterprise system across multi-site operating plants requires a structured, risk-mitigated implementation methodology. LedgerCore has been deployed in demanding industrial environments with zero operational disruption.

🔒 Industrial Enterprise Governance Matrix

- ✓ **Zero-Trust Architecture:** TLS 1.3 encryption across all network tiers and automated session timeout on unattended terminals.
- ✓ **Cryptographic Fiscal Locking:** SYSCOHADA periods are sealed using SHA-256 digital signatures, ensuring complete immunity against retroactive tampering.
- ✓ **Complete Traceability:** Every asset movement, meter reading, work order sign-off, and credit transfer logs the user ID, timestamp, IP address, and previous values.
- ✓ **Disaster Recovery & Redundancy:** Automated hot standby replication with Point-In-Time Recovery (PITR) guaranteeing zero transactional loss.

🚀 Turnkey 12-Week Implementation Plan

Weeks 1–3: Scoping & Chart of Accounts Harmonization

Mapping existing operational cost centers, operating sites, and SYSCOHADA revised accounts.

Weeks 4–6: Master Asset & Fleet Ingestion

Tagging heavy machinery, importing historical depreciation & component records.

Weeks 7–9: Maintenance & Budget Pilot

Workshop terminal rollout, telematics configuration, and commitment ceiling rules.

Weeks 10–12: Multi-Site Go-Live & Corporate Sign-Off

Parallel run validation, four-eye audit verification, and full production cutover.

Conclusion & Next Steps

LedgerCore provides industrial corporations with the certainty, control, and statutory compliance required to thrive in the CEMAC region. By eliminating the disconnect between workshop maintenance, asset valuation, and financial ledgering, your enterprise gains an unbeatable operational advantage.
